

We have extensively equipped, purpose-built industry specific hand tools and machines designed to meet the needs of our various disciplines. The workshop allows our students and trainees to develop a wide range of skills with the use of tools during practical classes and project works. Equipment includes welding machine, drilling machine, grinding machine etc. Lab contains cut models for providing better understanding of engines, tractor systems and pumps. Equipment related to farm machinery includes tillage implements, intercultural implements, plant-protection equipment, harvesting equipment and threshing equipment. Equipment for soil and water conservation, irrigation, processing, renewable energy equipment are also available in the lab.
