

A good command over language is imperative for effective communication. In order to enhance the linguistic skills and mastery, the establishment of a language lab has been initiated as part of in-session support.

Audio-visual resources that include interactive speaking videos, podcasts, and grammar animations that facilitate language learning are accessible from the computer lab. A remedial program is organised outside regular hours to bridge the language proficiency gap of those students who need extra help. The Language lab is set in the Computer lab/ARIS cell of the college.

Main Objectives

- The computer-aided language lab is directed towards providing an audio-visual learning experience to users.
 - The individualized learning experience establishes an affirmation of an important principle, which is the existence of the spoken language as distinct from the conventional written language for everyday context.
 - The lab is intended further to learn the use of English for formal and informal contexts.
 - The resources include a variety of self-instructional audio-visual modules that are learner friendly and focus on language acquisition ranging from beginner, intermediate and advanced levels.
 - A range of podcasts intended to assist language learning are available that equip the users with better communication skills and refine the target language proficiency.
 - The facilities provided in the lab can be used for phonetic drill, practice in stress and intonation, analogy drill, question forms, listening to native speeches and dialogues.
 - The resources are designed to foster individual learning experiences that allow students to learn with flexibility and at their own pace.
 - The computer-aided learning for classrooms encompasses a natural and progressive learning method where students refine aural-oral skills intuitively while using and practicing the language. This methodology assists students to learn in an easy and entertaining way, cultivating their motivation for learning, and increasing language retention.
 - The resources help to learn the idioms and expressions used in a variety of situations and develop communicative competence.
 - The learning aids can be used by pupils for the preparation of standardized English Language Tests.
-
